ABOUT

Pick & Transfer 100 is a transparent polypropylene (PP) application tape with a High Tack adhesive. This product is used to transfer decals & die-cut lettering from silicone paper liners to the final surface of application. The modified acrylic adhesive is very suitable for wet application and guarantees an effortless transfer & removal of the application tape. The application tape is transparent, allowing perfect positioning on the final surface. PP Film Lined has a siliconized kraft liner making it possible to cut the application tape to shape prior to application.
